## Summary

Full-Stack Developer skilled in frontend and backend development and scalable API & database design. Experienced in building end-to-end web apps with a focus on clean, maintainable code.

## Technical Skills

- Frontend – React JS, Tailwind CSS, Bootstrap
- Backend – Express JS, Node JS, Flask - Python, Django - Python, PHP
- Database – MySQL, MongoDB
- Tools – Git, Docker, Bash, MS Office Suite

## Experience

**Software Engineer** – Pine Labs | Oct 2024 – Present

- Implemented a configurable email template management, enabling dynamic template customization and automated emailing based on predefined designs, improving user engagement and reducing manual effort.
- Contributed to building a configurable gift card reselling platform using React.js, including product discount management and user-based whitelisting supported by a Node.js backend.
- Built a RAG-based chatbot using Python and React.js to assist with API documentation and configuration, helping integration clients with API onboarding and supporting internal teams with configuration guidance.

**Software Engineer Intern** – Pine Labs | Oct 2023 – Sept 2024

- Led enhancements to the cart backend REST API in Node.js, improving cart product deletion, optimizing batch order processing, and boosting overall system efficiency.
- Worked on the feature development in PHP, improving both frontend and backend performance by implementing best practices in clean code and scalable design to enhance overall application functionality.
- Developed an automated Python tool leveraging the Jira API to track internally generated alerts, enabling earlier detection of incidents and system failures.

## Projects

[\[Link\]](#) **ChatBit - A Realtime Chatting Application** – Full Stack Development

Tech Stack – Node JS, Express JS, React JS, Socket IO, Json Web Token

- Frontend using React JS and Daisy UI for creating interactive user interface.
- Backend using Node JS and Express JS to handle API integrations and MongoDB database handling.
- Realtime chat using Socket IO and Authentication using JWT.

[\[Link\]](#) **Mailroom - An Email Template & Communication Management System** – Backend Development

Tech Stack – Flask, Python, SQLAlchemy, Jinja2, JWT Authentication

- The backend is built using Flask to manage users, domains, applications, and email workflows.
- Executed a configurable template engine using Jinja2 for dynamic, design-based email generation.
- Added secure JWT authentication and APIs for template handling, activity logging, and client integrations.

[\[Link\]](#) **Diagno – A Disease Prediction Portal** – Full Stack Development

Tech Stack – Django, Python, SQLite, HTML, CSS, JavaScript, Bootstrap

- Created a health prediction portal using Django, integrating disease prediction, user management, doctor search, and appointment booking functionalities.
- Leveraged a supervised machine learning model to predict diseases based on user-provided symptoms.
- A clean frontend was built using HTML, CSS, JavaScript, and Bootstrap, with Django and SQLite powering a secure and scalable backend.

## Education

**Master of Computer Applications** | Vellore Institute of Technology, Vellore - Sept 2022 - Jul 2024

**Bachelor of Computer Applications** | Marwari College, Ranchi University - Aug 2018 - Aug 2021
